<b>Title</b>	<b>Making waterproof shopping bags</b>														
<b>Objectives</b>	<ul style="list-style-type: none"> <li>To reduce the amount of cotton in the making of fabric products;</li> <li>To reuse old materials in order to make new composite materials;</li> </ul>														
<b>Necessary resources</b>	Cotton fabric (used clothing, rags, curtains), polyethylene film (used shopping bags), scissors, baking paper, iron, ironing board, beaker with water, dropper.														
<b>Time</b>	60 minutes														
<b>Step by step instruction:</b>	<ol style="list-style-type: none"> <li>Cut a small piece of cotton fabric (6 × 6 cm)!</li> <li>Cut a piece of polyethylene film smaller than the piece of fabric (for example, 5 × 5 cm)!</li> <li>Place the cotton fabric on the ironing board and the polyethylene film on top of it!</li> <li>Cover both materials with baking paper so that it completely covers both the polyethylene and the fabric!</li> <li>With an iron heated to the temperature intended for ironing cotton, press it onto the surface of the paper and hold for about half a minute!</li> <li>Remove the baking paper and let the fabric cool. Turn the edges of the fabric over!</li> <li>Come up with a name for your resulting composite material and write it in the data recording table!</li> </ol> <p><b>Studying and comparing the properties of materials</b></p> <ol style="list-style-type: none"> <li>Test the mechanical strength of cotton, polyethylene and the resulting composite material by stretching the materials!</li> </ol> <p>Record your observations in the data recording table!</p> <ol style="list-style-type: none"> <li>Test the water resistance of cotton, polyethylene and the resulting composite material by placing a few drops of water on each material! Record your observations in the data recording table!</li> </ol> <table border="1"> <thead> <tr> <th>Property</th><th>Cotton fabric</th><th>Polyethylene film</th><th>Composite material</th></tr> </thead> <tbody> <tr> <td>Mechanical strength</td><td></td><td></td><td></td></tr> <tr> <td>Waterproofness</td><td></td><td></td><td></td></tr> </tbody> </table>			Property	Cotton fabric	Polyethylene film	Composite material	Mechanical strength				Waterproofness			
Property	Cotton fabric	Polyethylene film	Composite material												
Mechanical strength															
Waterproofness															
<b>Reflection:</b>	Draw a conclusion about whether the assumption is confirmed by evaluating the properties of the new material compared to the properties of the original materials!														

	<p>.....</p> <p>.....</p> <p>Why is there a need to create composite materials?</p> <p>.....</p> <p>.....</p> <p>How could the experiment be improved if it were done again?</p> <p>.....</p> <p>.....</p>
